The duty of science is to seek truth, and technology to seek application. Those who seek these ends in the field of food serve more than the cause of knowledge—they serve mankind itself. These scientists, engineers, educators and executives join in seeking truth and application in the only world-wide professional society of its kind. Together, they stimulate investigations into technological problems, and pursue the ensuing pathways to the ultimate conclusions; they present, discuss and publish the results; they advance the free interchange of data and ideas; and they join to raise food industry educational standards. These are aims of the

INSTITUTE OF FOOD TECHNOLOGISTS.
